Does The Speed Of Your Fan Vary?

STEP 1	Regulator bypassing is recommended	STEP 2	Ensure that the supply cable (Red & Black - Phase & Neutral) - are properly connected with the White OC connector. AC supply across the wires at both the points A and B should be within the range of 140Vac to 285Vac.	
STEP 3	Ensure that the blades are adjusted to their corresponding motor i.e. 900mm (sweep size) blades should not be fixed to a motor of a 1400mm (sweep size) fan.	
STEP 4	We recommend the use of D-type hooks. If any other type of hook is in use, then ensure that down-rod must not have any movement while the fan is running.	
STEP 5	Ensure that the minimum adjacent distance between 2 fans should be more than 1 metre.
