

Does The Speed Of Your Fan Vary?

<p>1 STEP</p>	<p>For a Better Performance use step regulator as the fan will not operate at a lower range if used with a non compactible stepless (Triac based)-Regulator, also Ensure to use Eletronic Regulator only, Using Electric Regulator will affect the fan performance</p>	
<p>2 STEP</p>	<p>Ensure that the supply cable (Red & Black - Phase & Neutral) - are properly connected with the White OC connector. AC supply across the wires at both the points A and B should be within the range of 140Vac to 285Vac.</p>	
<p>3 STEP</p>	<p>Ensure that the blades are adjusted to their corresponding motor i.e. 900mm (sweep size) blades should not be fixed to a motor of a 1400mm (sweep size) fan.</p>	
<p>4 STEP</p>	<p>We recommend the use of D-type hooks. If any other type of hook is in use, then ensure that down-rod must not have any movement while the fan is running.</p>	
<p>5 STEP</p>	<p>Ensure that the minimum adjacent distance between 2 fans should be more than 1 metre.</p>
